CIS 497/498 SENIOR PROJECT

Team: Work-In-Progress
RFID PROJECT
Project Description:
We will be integrating RFID tags into the IT service desk REST system with a Raspberry Pi. Using a python script,
the Raspberry Pi will allow employees to keep inventory of equipment stored on site.

The problem at hand is that expensive medical supplies are often misplaced or stolen. Our project will provide a way for employees to monitor inventory and log employee room/equipment access to minimize theft and mishandling.
